### **Election/Restrictions**

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1, claim 1-8 and 19 are directed to selecting an initial preload value, said step of selecting including determining a product of a maximum frequency offset between a read clock and write clock, and a maximum time between arbitrary symbols in a data stream; receiving, in the storage cells, data units in response to a write pointer; and providing data units from the storage cells in response to a read pointer.

Species 2, claims 9-12 and 20 are directed to setting a size of a FIFO buffer to include a number of storage cells equal to a product of a maximum frequency offset between a write clock and a read clock and a maximum number of data units in a data interval defined by two arbitrary symbols; delaying a start of the read pointer, relative to the write pointer, by a portion of the storage cells in the FIFO; determining if the read pointer is drifting toward or away from the write pointer; if the read pointer is drifting away from the write pointer, deleting selected number of arbitrary symbols from the FIFO buffer such that, at the beginning at a subsequent data interval, the read pointer immediately follows the write pointer; and if the read pointer is drifting toward the write pointer, adding additional arbitrary symbols to the FIFO buffer such that, at the beginning of a subsequent data interval, the read pointer immediately leads the write pointer in the FIFO buffer.

Species 3, claims 13-18 are directed to a write pointer for writing data in accordance with a frequency of a write clock; a read pointer for reading data in accordance with a frequency of a read clock; a number of storage cells, said number of storage cells being substantially equal to a product of a maximum frequency offset between the write clock and the read clock, and a maximum number of data units in a data interval between arbitrary symbols in the data stream.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 5809.02(a).

Should applicant traverse on the ground that the species are not patentability distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
